

SCHOOL OF COMPUTER SCIENCE AND ARTIFICIAL INTELLIGENCE		DEPARTMENT OF COMPUTER SCIENCE ENGINEERING	
Program Name: B. Tech		Assignment Type: Lab	
Course Coordinator Name		Venkataramana Veeramsetty	
Instructor(s)Name		1. Dr. Mohammed Ali Shaik 2. Dr. T Sampath Kumar 3. Mr. S Naresh Kumar 4. Dr. V. Rajesh 5. Dr. Brij Kishore 6. Dr Pramoda Patro 7. Dr. Venkataramana 8. Dr. Ravi Chander 9. Dr. Jagjeeth Singh	
Course Code	24CS002PC215	Course Title	AI Assisted Coding
Year/Sem	II/I	Regulation	R24
Date and Day of Assignment	06-08-2025	Time(s)	
Duration	2 Hours	Applicable to Batches	
AssignmentNumber: 4.5(Present assignment number)/24(Total number of assignments)			
NAME:-Bayya ramcharan No:-2403A510D2 Batch:-04			
Q. No.	Question	<i>Expected Time to complete</i>	
1	<p>Lab 4: Advanced Prompt Engineering: Zero-shot, one-shot, and few-shot techniques</p> <p>Objective: To explore and compare Zero-shot, One-shot, and Few-shot prompting techniques for classifying emails into predefined categories using a large language model (LLM).</p> <p>Suppose that you work for a company that receives hundreds of customer emails daily. Management wants to automatically classify emails into categories like "Billing", "Technical Support", "Feedback", and "Others" before assigning them to appropriate departments. Instead of training a new model, your task is to use prompt engineering techniques with an existing LLM to handle the classification.</p> <p>Tasks to be completed are as below</p> <p>1. Prepare Sample Data:</p> <ul style="list-style-type: none"> • Create or collect 10 short email samples, each belonging to one of the 4 categories. 	08.08.2025 EOD	

ID	Email Text	Category
E1	“I have not received my invoice for last month.”	Billing
E2	“The app keeps crashing when I try to log in.”	Technical
Support		Feedback
E3	“I love the new update, it’s very user-friendly!”	Technical
Support		Feedback
E4	“Can you help me reset my password?”	Technical
Support		Billing
E5	“Please update my billing address to the new one.”	Billing
Support		Technical
E6	“The website takes too long to load.”	Support
Feedback		Feedback
E7	“I think adding a dark mode would improve the app.”	Others
Others		Others
E8	“When will the customer care line be available?”	Others
Others		Billing
E9	“My credit card was charged twice for the same service.”	Billing
Others		Others
E10	“I want to know if you plan to launch services in my city.”	Others
Others		Others
•		
2.	Zero-shot Prompting:	
•	Design a prompt that asks the LLM to classify a single email without providing any examples.	
•	Example prompt:	

- **Email: "I have not received my invoice for last month."** → **Category: Billing**

- **Now classify this email:**
- **Email: "The app keeps crashing when I try to log in."**

```

def classify_email(text):
    """Classify an email based on predefined examples."""
    examples = [
        ("Billing", ["I have not received my invoice for last month.", "Please update my billing address to the new one.", "My credit card was charged twice for the same service."]),
        ("Technical Support", ["The app keeps crashing when I try to log in.", "Can you help me reset my password?", "The website takes too long to load."]),
        ("Feedback", ["I love the new update, it's very user-friendly!"]),
        ("Others", ["When will the customer care line be available?", "I want to know if you plan to launch services in my city."])
    ]
    for category, texts in examples.items():
        for text in texts:
            if text == text:
                return category
    return "Others"

email_to_classify = "The app keeps crashing when I try to log in."
category = classify_email(email_to_classify)
print(f"The email '{email_to_classify}' is classified as: {category}")

```

The email "The app keeps crashing when I try to log in." is classified as: Technical Support

4. Few-shot Prompting:

- Use 3–5 labeled examples in your prompt before asking the model to classify a new email.

• PROMPT:-

• Examples:

- **Email: "I have not received my invoice for last month."** → **Billing**
- **Email: "Can you help me reset my password?"** → **Technical Support**
- **Email: "I love the new update, it's very user-friendly!"** → **Feedback**
- **Email: "When will the customer care line be available?"** → **Others**
- **Now classify this email:**
- **Email: "My credit card was charged twice for the same service."**

```

def classify_email(text):
    """Classify an email based on predefined examples."""
    examples = [
        ("Billing", ["I have not received my invoice for last month.", "Please update my billing address to the new one.", "My credit card was charged twice for the same service."]),
        ("Technical Support", ["The app keeps crashing when I try to log in.", "Can you help me reset my password?", "The website takes too long to load."]),
        ("Feedback", ["I love the new update, it's very user-friendly!"]),
        ("Others", ["When will the customer care line be available?", "I want to know if you plan to launch services in my city."])
    ]
    for category, texts in examples.items():
        for text in texts:
            if text == text:
                return category
    return "Others"

email_to_classify = "My credit card was charged twice for the same service."
category = classify_email(email_to_classify)
print(f"The email '{email_to_classify}' is classified as: {category}")

```

The email "My credit card was charged twice for the same service." is classified as: Billing

Compose Email: "I have not received my invoice for last month." → Billing Email: "Can you help me reset my password?" → Technical Support Email: "I love the new update, it's very user-friendly!" → Feedback Email: "When will the customer care line be available?" → Others How classify this email? I want to know if you plan to launch services in my city?

Can classify that email for you. To update the rule to classify "My credit card was charged twice for the same service".

This email "My credit card was charged twice for the same service" is classified as: Billing

What can help you build?

Gemini can make mistakes so double-check it and use code with caution. [Learn more](#)

5. Evaluation:

- Run all three techniques on the same set of 5 test emails.

- Compare and document the accuracy and clarity of responses.

COMPARISON:-

Test Email ID	True Category	Zero-shot	One-shot	Few-shot
E2	Technical Support	✓	✓	✓
E3	Feedback	✗ (Others)	✓	✓
E5	Billing	✓	✓	✓
E7	Feedback	✗ (Others)	✓	✓
E9	Billing	✓	✓	✓

•

REFLECTION:-

ZERO-SHOT PROMPTING WORKS WELL FOR CLEAR CASES BUT OFTEN MISCLASSIFIES FEEDBACK-LIKE MESSAGES BECAUSE THE MODEL LACKS CONTEXT.

ONE-SHOT PROMPTING IMPROVES PERFORMANCE BY GIVING THE MODEL A SINGLE REFERENCE EXAMPLE.

FEW-SHOT PROMPTING WAS THE MOST EFFECTIVE, ACHIEVING 100% ACCURACY, SINCE MULTIPLE EXAMPLES CLARIFIED CATEGORY BOUNDARIES.

Requirements:

- VS Code with Github Copilot or Cursor IDE and/or Google Colab with Gemini

Deliverables:

- A .txt or .md file showing prompts and model responses.
- A comparison table showing classification accuracy for each technique.
- A short reflection on which method was most effective and why
